09-27-05

Inventor(s): BOUCHARD et al. Application No.: 10/661,780

Attorney Docket No.: 098501-0305998

II. AMENDMENTS TO THE CLAIMS

1-21. (Canceled)

22. (Currently Amended) In a A method of treating infertility fertility disorders by administering an LHRH-antagonist selected from the group consisting of ganirelix, antarelix antide, azaline B. ramorelix, A-76154, Nal-Glu, 88-88 and cetrorelix, and inducing follicle growth by administration of hMG or recombinant FSH (Controlled Ovarian Stimulation), "COS" in combination with clomiphene, the improvement comprising administering an amount of said LHRH-antagonist which is sufficient to suppress endogenous LH while maintaining FSH secretion at a natural level and estrogen development is not affected up until ovulation induction.

23-25. (Canceled)

- 26. (Currently Amended) The method according to elaim 25 claim 22, wherein Controlled Ovarian Stimulation (COS) is started on day 2 after spontaneous menstrual bleeding by administering 100 mg clomphencitrate per day for 3 to 7 days and 0.2 to 1.0 mg Cetrorelix cetrorelix is administered with hMG starting on stimulation day 5.
- 27. (Currently Amended) The method according to elaim 25 claim 22, wherein COS Controlled Ovarian Stimulation is started on day 2 after spontaneous menstrual bleeding by administering 100 mg Clompheneitrate clomiphene per day for 3 to 7 days and 0.2 to 1.0 mg Cetrorelix cetrorelix is administered with recombinant FSH starting on stimulation day 6.
- 28. (Currently Amended) The method according to elaim 24 claim 27 wherein Cetrorelix cetrorelix is administered subcutaneously in an amount between 0.1 and 5 mg per day during a multiple dosing posology regimen.
- 29. (Previously Presented) The method according to claim 22 wherein the LH-RH antagonist is administered as a single or dual subcutaneous dose in an amount between 1 and 10 mg.
- 30. (Previously Presented) The method according to claim 29 wherein the LH-RH antagonist is administered as a single or dual subcutaneous dose in an amount between 2 and 6 mg.

Inventor(s): BOUCHARD et al. Application No.: 10/661,780

15:10

Attorney Docket No.: 098501-0305998

- 31. (Currently Amended) The method according to claim 22 wherein the LH-RH antagonist is administered as an initial single does dose in the range of 1 mg to 10 mg, followed by a multiple daily dose in an amount between 0.2 and 1.0 mg.
- 32. (Previously Presented) The method according to claim 31 wherein the single dose is between 2 and 6 mg.
- 33. (Previously Presented) The method according to claim 22 wherein ovulation is induced by recombinant LH.
- 34. (Previously Presented) The method according to claim 22 wherein ovulation is induced by native LHRH.
 - 35. (Cancel)
- 36. (Currently Amended) The method according to claim 22 wherein ovulation is induced by human chorionic gonadotropin HCG.
- 37. (Previously Presented) The method according to claim 22 wherein native LHRH or an LHRH antagonist is administered so that luteal phase supplementation is avoided and negative effects of HCG are prevented during the luteal phase.
- 38. (Previously Presented) The method according to claim 22 wherein recombinant LH, native LHRH or LHRH agonist is administered so that ovarian hyperstimulation syndrome is avoided.
- 39. (Currently Amended) A method of treating infertility disorders comprising administering an amount of Cetrorelix cetrorelix as an LH-RH antagonist which is sufficient to suppress endogenous LH while maintaining FSH secretion at a natural level and not affecting estrogen development and further administrating clomiphene to induce follicle erowth, wherein after cessation of Cetrorelix cetrorelix administration, subsequent follicle development is facilitated only with remaining endogenous LH and FSH.
- 40. (Currently Amended) The method of claim 22 39 wherein the LH RH antagonist Cetrorelix cetrorelix is administered beginning on cycle day 6 to 10 and ovulation is induced between day 7 and day 11 of the menstrual cycle.

30520533v1 4

Inventor(s): BOUCHARD et al. Application No.: 10/661,780

15:10

Attorney Docket No.: 098501-0305998

- 41. (Currently Amended) The method of claim 24 39 wherein Getrorelix cerrorelix is administered either in a single or dual dose of 1 to 10 mg or in a multiple dosage of 0.1 to 0.5 mg starting at cycle day 1 to 10 and ovulation is induced between day 9 and day 20 of the menstrual cycle.
- 42. (Currently Amended) The method according to claim 41 wherein Cetrorelix cetrorelix is administered starting on cycle day 4 to 9.
